now 'Elasto'-It Sells on Sight!

It's advertised as a Chemist's Line

Read What Users of 'Elasto' Say:—

Original letters have been seen by a representative of "The Chemist and Druggist")

Varicose Veins

a sufferer of varicose veins, I must state before using 'Elasto' I was tortured with d and aching legs. After taking a month's oly of 'Elasto' I remark with emphasis that feeling of tiredness and aching has vanished. all sufferers of varicose veins I certainly ommend 'Elasto'"—they are a boon.

Rheumatism

may say that I have found 'Elasto' a wonderhelp. For years I suffered with rheumatism eet and legs, and at times found it difficult to p about. 'Elasto,' however, afforded me immediate relief, and, although I was relieved of the pains and inconvenience, I have never ceased to take them regularly, as I have found them to act as a tonic as well, giving me energy that I previously lacked. I have recommended them to many others since.

AT 1108.

---- F. T.

Varicose Ulcers

"I have great pleasure in writing to say my legs are quite better and I cannot praise your 'Elasto' enough. I had suffered agonies with varicose ulcers; in fact I thought I should never get them better, but, thanks to 'Elasto,' my legs are completely cured."

AH 1263.

--- E. H.

IESE generous acknowledgements are an indication of the solid goodwill behind Elasto. Thousands of users, all over the country, are daily telling their friends of similar periences with this fine remedy.

ecommend 'Elasto'—and a satisfied customer will recommend You!

NEW ERA TREATMENT CO., LTD.

DEPT. R

CIL HOUSE, HOLBORN VIADUCT, LONDON, E.C.I

The achievement of the highest standard of purity, reliability and efficacy is obtained only by the most careful supervision throughout the process of manufacture. To this scientific control fame of Beecham's Pills and Beecham's Powders may justly be ascribed—thereby setting the seal upon the intrinsic worth of these famous home medicines.

Beecham's Pills AN Beecham's Powder

The practical experience of sheep farmers is increasing the demand for

Inoculation of ewes in the autumn with Evans Lamb Dysentery Vaccine reduces losses amongst lambs in the spring. Low cost, simple treatment, consistent advertising and—above all—the practical experience of the sheep farmer, all point to a still wider demand this autumn.

REVISED CONTENTS OF STANDARD PARCELS

OWING to shortage of labour and packing materials (and in order to comply with the Government's demand for utmost economy), we have been compelled to restrict the direct supply of our four main products to pre-packed parcels only. To meet the requests of a number of our customers, we have recently revised our original parcels to the contents shown below. Retailers requiring assortments other than these can obtain from their Wholesalers.

The minimum for a direct order remains at £5, which can be made up by parcel 'A'; or by any two of parcels 'B' to 'O'; or by any one of 'B' to 'O' plus a selection of our other preparations, such as Alkia Saltrates, Bisuroids, Nemakol and Nemolin. Toilet lines may also be included to the value of your quota.

What's yours?

Overtiredness is pretty general nowadays. What's your advice when customers ask you to prescribe for it? Every thinking citizen is thankful that our rations are as good as they are. Nevertheless, the public is well aware that the thing that would do them most good is more nourishment — in particular more fats of the right sort. And there's absolutely no reason why they shouldn't have it.

There's plenty

SevenSeaS Cod Liver Oil is a far richer and more concentrated protective food than butter or eggs. There is no shortage; supplies are now normal and should remain so throughout the winter. There are no sales restrictions; the more you sell, the better for the nation's health.

We're telling them

SevenSeaS will be publicized to the fullest possible extent this winter. In mid-September advertisements will start reminding the public that SevenSeaS is an extremely nourishing supplementary *food*, just as good for adults as for growing children; that it remedies nervous exhaustion by building up depleted strength reserves and that it is readily available. Please remember this. Though supplies are normal, transport is not. It is wise to re-order in good time.

WILLIAM SESSIONS, Ltd., The Ebor Press, York

a NEW type of INSULIN

A combination of Insulin and Globin (with Zinc) in a clear SOLUTION

'Wellcome' brand Globin Insulin (with Zinc) is a new type of Insulin developed in the Burroughs Wellcome & Co. Laboratories, Tuckahoe, New York. It has a delayed action which is intermediate in its rate of onset and in its duration between those of unmodified Insulin and Protamine Insulin (with Zinc) Suspension. This feature enables satisfactory control to be maintained in many cases by a single daily injection.

'Wellcome' brand Globin Insulin is a clear, stable solution containing Insulin combined with Globin (a simple protein obtained from blood) and a small percentage of Zinc.

Order a small stock now to meet prescription demand. Further information will be supplied on request.

Available in one strength only: 80 units per c.c. In bottles containing 5 c.c. Price 5/2

BUENOS AIRES

SUBLINGUAL ADMINISTRATION OF THE SEX HORMONES ... in the form of I.I.N.G.U.E.T.S.

Clinical investigation \star has shown that absorption by the rich capillary network under the tongue is more effective than from the intestinal tract since the hormone is destroyed neither by intestinal ferments nor, as it enters directly into the systemic circulation, by the liver before it can exert its effect.

★ Brit. Med. J., 1942, 1, 668, J. Clin. Endocrin., 1942, 2, 639.

The Ciba sex hormones for oral administration are, therefore, now being put up in the form of LINGUETS for sublingual use. LINGUETS are sucked under the tongue and take about ten minutes to disappear. As little saliva as possible should be swallowed.

PERANDREN LINGUETS

contain the orally active derivative of the male sex hormone, methyl testosterone, and may be prescribed in all conditions in which Perandren is indicated in moderately low dosage.

(Bottles of 20 and 100 each containing 5 mg.)

LUTOCYCLIN LINGUETS

have replaced the original Oral Tablets and contain anhydro-hydroxy-progesterone (ethisterone), a modification of progesterone with marked oral progestational activity. Indications, dosage, packages and prices remain as for the original form.

(Bottles of 10 and 50 each containing 5 mg.)

OVOCYCLIN LINGUETS

The orally active form of the oestrogenic hormone, oestradiol, will in future be prepared as Linguets in place of Tablets. Commencing with the weakest strength, OVOCYCLIN LINGUETS 0.04 mg, have now replaced the original Tablets of, the same strength. As and when conditions allow, the two remaining strengths will be issued as LINGUETS.

Indications, dosage and prices remain as pre-

The packages are as follows:—'
LINGUETS

Bottles of 50 each containing 0.04 mg.

Bottles of 30 each containing 0.1 mg. Bottles of 25 each containing 1 mg.

NEWS OF THE WEEK

Deputation to the Minister of Health.— August 26 a pharmaceutical deputation s received by the Minister of Health and resentatives of the Ministry together h representatives of the Department of alth for Scotland. The deputation placed ore the Minister the views of the three anisations represented upon the defects the present system and the arrange-nts, outlined in the already published morandum of these bodies, which should made to meet the pharmaceutical rerements of a national medical service. e Minister informed the deputation that eir views would be considered and that a later stage discussions would take place ween the Ministry and the organisations resented. The members of the deputan were: Representing the Pharmaceutical week. Representing the Intrindential viety of Great Britain. Mr. W. S. Howells esident); Mr. F. G. Wells (vice-presint); Mr. H. C. Shaw (treasurer); Mr. A. Meldrum; Mr. H. N. Linstead, M.P. cretary); Mr. F. W. Adams (deputy

secretary); Representing the National Pharmaceutical Union: Mr. T. Heseltine (chairman); Mr. W. J. Tristram (vice-chairman); Mr. A. R. Melhuish (treasurer and chairman, Central N.H.I. Committee); Mr. G. A. Mallinson (secretary); Mr. H. Noble (assistant secretary); Representing the Pharmaceutical Standing Committee for Scotland: Mr. F. W. M. Bennett (chairman); Mr. J. Anderson; Dr. J. Tait (secretary).

Medical Examination of Pharmacists.—A notice issued by the Central Pharmaceutical War Committee states that arrangements have been made for the medical examination of pharmacists and dispensers under the age of thirty at registration without prejudice to the existing deferment positions of the men concerned. It should be noted that these arrangements cover not only retail pharmacy, but men employed in wholesale houses and hospitals. Pharmacists and dispensers in these age groups are, however, advised that if upon

cessation of their deferment granted on pharmaceutical grounds they should desire to make application for postponement on grounds of exceptional hardship, such application should be made to the Ministry of Labour and National Service at the time of the medical examination.

Greeting to Swiss Pharmacy Students.— The British Pharmaceutical Students' Association has sent the following message to the Swiss Society of Pharmacy on the occasion of the latter's centenary celebration: "We; the British Pharmaceutical Students' Association, send greetings to the Swiss Society of Pharmacy on the celebration of its centenary and look forward to meeting the Swiss pharmacists and students after the cessation of hostilities."

Inquest.—An inquiry was held at St. Albans recently into circumstances attending the death of a twenty-three months old child. The mother stated she had bought a bottle of lysol which was in a cardboard carton. This was placed on the table while she went to another room. Returning on hearing a scream she found the bottle on the floor and the child with his hands to his mouth. The child died on the way to the hospital. Questioned by the Deputy Coroner in regard to the cork used in the lysol bottle, a medical practitioner said: Corks vary. It is not the usual type. They usually press down very tightly. It is not the usual type I have been accustomed to seeing. The Deputy Coroner said the boy died from lysol poisoning which he took himself, and the verdict would be one of "Death by misadventure." It was an unfortunate accident that this child got the bottle, and unfortunate that the cork was one which could be easily removed.

"Ultimatum" to London Chemists .- In a firmly worded memorandum to all chemists under contract with Insurance Committees in the area of the London Pharmaceutical Committee, except those situate within the City boundary, the secretary of the latter committee (Mr. G. A. Tocher, M.P.S.) states that complaints have been received, both from the Insurance Committee and from the Panel Committee, of inadequate dispensing service. In some districts the complaints are found to be justified. Chemists are reminded that National Health Insurance dispensing is a public service under Act of Parliament; that under the terms of service one or more shops in every district must be open to insured persons until 7 p.m. daily throughout the year, except on closing days, Sundays, and Bank holidays; and that when a shop is closed it is necessary to exhibit a notice indicating other places where medicines may be obtained locally. The eletter states that if there are no chemists' shops open regularly until 7 p.m. in the area of the recipient, a rota must be formed at once. A postcard is enclosed on which details of local conditions must be inserted and which must be forwarded to the secretary of the Pharmaceutical Committee within seven days.

Manchester Garden Party.-A garden party, arranged jointly by the Manchester Association Pharmaceutical and local Branches of the Pharmaceutical Society and National Pharmaceutical Union, was held at Wythenshaw Park on August 25, by courtesy of the City Corporation. The chief attractions were golf on the miniature golf course in the Park, and a bowling competition. Tea was served in the library at Wythenshaw Hall. After tea, the Association president (Mr. W. Edwards) handed their prizes to the winners in the golf competition, as follows:—Ladies, I, Mrs. F. D. Gee; 2, Miss Latts; Gentlemen, I, Mr. F. C. Baines; 2, Mr. J. H. Franklin. The bowling competition lasted until late in the evening, the winners being:—Ladies, Mrs. H. G. Pilling and Miss Sharples; Gentlemen, Messrs. W. E. Phillipson and T. Miller. The prizes were very generously provided by Messrs. W. Edwards (Association president), H. Brindle (chairman, branch of the Society), and E. Cronin (chairman, N.P.U. branch).

Birmingham Analyst's Report.—The Birmingham City Analyst, in his report for the second quarter of 1943, states that of ninety-three drugs sampled four were found incorrect. A sample of health salts had the analysis printed on the label as required by the Pharmacy and Medicines Act, 1941. Analysis revealed that the percentage of sodium bicarbonate was 35.0 instead of 39.95 as declared; of tartaric acid 29.1 instead of 39.95; and of magnesium sulphate 5.6 instead of 8.55. Partial decomposition had, in fact, taken place resulting in the loss of part of the bicarbonate and tartaric acid and the formation of sodium bitartrate to the extent of 14.3 per cent. The managing director of the manufacturing firm was interviewed and proposed to have an analysis carried out, the findings to be submitted to the Public Health Department. A sample of maltextract tablets contained 19 per cent. of extraneous mineral matter.

TOPICAL REFLECTIONS

Disposal of War Stocks

The problem of the disposal of surplus Government stocks after the war is ended has, it is satisfactory to read, been thoroughly discussed by an American official (p. 221). The "opposite numbers" in the United States to our departmental chiefs have a reputation for expansiveness when a matter of this kind arises. Thus, remembering the witticism of Clemenceau when he was told that President Wilson had promulgated fourteen points, "Et le bon Dieu se contenta de dix," I was relieved to notice that in Mr. T. W. Delahanty's survey of the prospective situation only five points "outstanding." His remarks were practical. While I doubt whether "there should be much less cause for worry" on the part of commercial communities because "the management and plans for this war were so much more thorough and comprehensive than in 1914-18," I agree that "the manufacturers could plan in advance to forestall the problem, should it arise," and that "market research could act as a further insurance." The experience of public disposal in the United States after the last war shows, among other things, that sales by auction yielded the best prices. Whatever methods are adopted at the close of the present war, the speaker was entirely sound in his view of the general aspects of this many-sided question, and notably on such points as credit and deterioration. The primary problem of governments will, as he foresees, be "to get production back into normal functioning as rapidly as possible and with this view all on this side of the Atlantic can agree.

On a Desert Island

By what is no doubt a printer's error, the "rescue" of Alexander Selkirk is made, on p. 233, to take place in 1769. Selkirk died in 1723. Though his career may have suggested hints for the narrative of "Robinson Crusoe," he can hardly be regarded as the original of the hero of that book. The matter is discussed at length in one of the volumes (the fourth, I think) of Dr. Ernest Baker's "The English Novel," and more briefly in Chapter IX of the late R. H. U. Bloor's delightful book, "The English Novel from Chaucer to Galsworthy." Mr. Bloor points out that, according to the evidence, Dampier, an explorer and pirate born in 1652, knew of three "Robinson Crusoes" on the island of Juan Fernandez, and knew two of them personally. Dampier was

present when Selkirk, at his own desire. left his ship and landed for a stay on the island. There were two good reasons for this choice, namely, that he hated the captain of his ship and that he expected it to go to the bottom. Defoe, with his genius for assimilating hints, made use, no doubt, of Dampier's "Voyages." Thomas Dover of Dover's powder fame, the subject of your question, has a further, if dubious, claim to remembrance in his fondness for prescribing mercury, a subject of severe criticism by his contemporaries. He may have "got away with it" when practising in Gloucestershire; but his London col-leagues used their pens to such effect on this topic that he saw fit to reply in similarly vigorous terms. This controversy was referred to in your Special Issue of June 29, 1935.

Lavoisier

The bicentenary of the birth of Antoine Laurent Lavoisier, which occurred on August 26, would in normal times have attracted more public attention than it in fact has. The work of several distinguished predecessors-Mayow, Boyle, Priestley and others—led up to his epoch-making discovery of the importance of the gas he named oxygen. They were handicapped, however, by preconceived theories, and even Priestley, under the deadening influence of the phlogiston hypothesis, just missed the full significance of his famous experiment with "the calx of mercury." With true scientific detachment he communicated his results to Lavoisier in 1774, and the French scientist followed up the clue. In 1789, the year of the outbreak of the French Revolution, Lavoisier's treatise containing his conclusions was published. He was very versatile, his studies extending to geology and even to finance. interest in pure science led to plans for the application of his discoveries to daily life. The promoters of the Revolution, to whom he at first looked for reforms, had no use for him; and at the age of fifty he was sent to the guillotine on a charge of maladministration after a trial that was a travesty of justice. With an established reputation in and beyond France, his great powers might confidently have been expected to yield further benefits to mankind. It is one of the tragedies of history that so brilliant a combination of the scientific and the practical in the same brain was thus lost to the world. **Xrayser**

LEGAL REPORTS

Dangerous Drugs Act.—At Bexhill, recently, J. G. Murray, M.P.S., 5 Collington Mansions, pleaded guilty to eight offences under the Dangerous Drugs Regulations. He was summoned for supplying dangerous drugs in four prescriptions without entering them in the register, with having dispensed three prescriptions containing such drugs and failing to mark on them the dates on which they were dispensed, and with dispensing one prescription containing a dangerous drug on which was not inscribed a provision by a doctor that it could be dispensed a second time after a certain interval.

According to police evidence no entry had been made in the register between November 23, 1942, and June 29, 1943, and the opinion had been formed that defendant was attempting to give his customers the attention they had before the war to the detriment of his records. The chairman of the magistrates said that while taking into consideration defendant's health conditions and his shortage of staff, there must be a conviction. In one case of failing to make an entry in the register he would be fined f1, with 17s. 3d. costs, in one case of failing to mark a prescription he would be fined 10s., and for dispensing a prescription a second time a nominal fine of 2s. 6d. was imposed. The other summonses were dismissed.

Alleged Theft of Drugs .- At a field general court martial at Aldershot, recently, Staff-Sergeant Ronald Garb, R.A.M.C., pleaded not guilty to nine charges. first alleged prejudicial conduct by writing himself, and procuring Pte. E. H. Perry to write, certain prescriptions for morphine and improperly, without authority, signing twenty-eight prescriptions in the name of a former medical officer in charge of the reception station where accused was serving. Secondly, Staff-Sergeant Garb was charged with stealing 50 tablets of morphine tartarate, and there was a third alternative charge of receiving the tablets. Next was a charge of stealing 50 tablets of potassium chlorate and 50 tablets of formalin and mint, and there was a fifth alternative charge of receiving. The remaining charges related to the alleged thefts of the following: (6), three pairs of forceps; (7), 250 tablets of codeine, 500 tablets of aspirin, 500 tablets of Dover's powder, a roll of cotton wool and a quantity of gauze and lint; (8), a case containing a hypodermic syringe and drugs; and (9) 24 scalpel blades.

The prosecution said with regard to the first charge that the prescriptions were made

out to cover a deficiency in solution morphine which the dispenser had docovered. There was no suggestion th Garb stole the morphine or had used improperly. After witnesses had called, accused admitted signing the pr scriptions but said he had no improp intent.

The Court found accused not guilty the third, fifth, sixth and eighth charge Findings on the other charges will be mad known later.

TRADE NOTES

Now Chargeable with Tax.—A Customs d Excise ruling that Lectona tonic food now chargeable with purchase tax at the te of 162 per cent. has been made known. his product is manufactured by Matthews

Wilson, Ltd., 6 Cole Street, London,

Trade Price List.—The British Drug ouses, Ltd., Graham Street, City Road, ondon, N.I, announce that the B.D.H. ade price list dated August 1943 is now Pharmacists requiring copies ould apply, enclosing one penny stamp comply with the paper requirements. arly application is advised.

Full-strength Ammonia Solution.-Chenical & Natural Products, Ltd., Wim, ledon Factory Estate, London, S.W.19 raw the attention of chemists to the fact hat a poisons licence is needed for selling Il cleansing solutions with an ammonia ontent of 5 per cent. or over. This includes crubbs' cloudy ammonia.

Revised Packings .- Bob Martin, Ltd., outhport, Lancs, have found it necessary, nder S. R. & O. 1366, to withdraw the 1-unit packages of Bob Martin's conditionowder tablets and of Tibs. All orders for I's will be filled with new large-size packigs. These are, for condition-powder ablets, packets of nine and cartons of hirty-six; for Tibs, packets of nine and artons of twenty-seven.

Photographic Exposure Guide.—A new nd revised war emergency edition of the Vellcome Photographic Exposure Guide, y Burroughs Wellcome & Co., 183 Euston Road, London, N.W., has been issued. The ruide includes the well-known exposure calulator, with a revised list of plate and film actors, and contains useful notes that will * help photographers to make the best use of the restricted material available. dition is limited and the possibility of Orders eprinting is unlikely. herefore be placed immediately.

Sex Hormones Sublingually.—Ciba, Ltd., The Laboratories, Horsham, Sussex, claim that it has been established by clinical nvestigation that absorption of hormones by the rich capillary network under the tongue is more effective than from the ntestinal tract, since the hormone is destroyed neither by intestinal ferments nor, since it enters directly into the systemic circulation, by the liver before it can exert its effect. The Ciba sex hormones for oral administration are therefore put up in

the form of Linguets, which are sucked under the tongue. They take about ten minutes to disappear. The varieties marketed are perandren, lutocyclin and ovocyclin.

Business Changes

THE offices and warehouses of E. A. Smee & Son, Ltd., I Morocco Street, Bermondsey, London, S.E.I, are closed from August 30 until September 11.

J. A. EWING & Co. (LONDON), LTD., notify the trade they are no longer operating from Hatch End or King William Street, E.C.4. Their new address for all departments and including the W. B. Pickles & Sons department, is Finsbury Court, Finsbury Pavement, London, E.C.2. Telephone: Clerkenwell 6231.

Urgent instructions relating to advertising and subscriptions should be sent to the C. & D., 17 Argyle Street, Bath, Somerset.

COMPANY NEWS

CHEMICAL TRANSPORT, LTD. (P.C.).—Capital £100. To co-ordinate transport, and particularly the movement of chemicals in bulk. Directors to be appointed. Solicitors: Soames, Edwards & Jones, 429 Strand, London, W.C.2.

Domestic Chemical Compounds, Ltd. (P.C.).—Capital £1,000. To acquire the business of chemical manufacturers carried on by Clifford Moore and John R. Archibald at Newcastle-on-Tyne. C. Moore and J. R. Archibald, directors. R.O.: 217 Westgate Road, Newcastle-on-Tyne.

Medo-Chemicals, Ltd. (P.C.).—Capital £500. Chemists, druggists, importers and manufacturers of and dealers in industrial preparations and proprietary articles, etc. Rudolf J. Hulse and Ralph W. Dixon, directors. R.O.: 178 Pentonville Road, London, N.I.

A. W. Bethune, Ltd. (P.C.).—Capital £600. To acquire the business of a chemist and druggist carried on as A. W. Bethune at 286 High Street, Langley, Slough. Andrew W. Bethune, M.P.S., Adelaide H. Bethune and Stella J. Kirkham, directors. R.O.: 286 High Street, Slough.

A. M. York & Sons, Ltd. (P.C.).—Capital £1,000. Importers, exporters and manufacturers of and dealers in rubber goods, chemicals, druggists' sundries; etc. Alfred M. York and Roland York, both of 151 Boundaries Road, London, S.W.12, directors. R.O.: 158 Bishopsgate, E.C.:2.

Hedley Pattinson, Ltd. (P.C.).—Capital £1,000. To acquire the business of a chemist carried on as "Hedley Pattinson" at 213 Whitley Road, Whitley Bay, Northumberland, by Lilian J. Ewart. Lilian J. Ewart, Lilian J. Elliott, and Mary A. Mann, directors. R.O.: 213 Whitley Road, Whitley Bay.

D. & B. WALKER (SOUTH SHIELDS), LTD. (P.C.).—Capital £1,500. To acquire the business of family and shipping chemists carried on as Dixon & Black at 51–53 Hudson Street, Tyne Dock, S. Shields. Thomas H. Dixon and Norman Black, M.P.S., 14 Sunnilaws, S. Shields, directors. R.O. as above.

Watkinsons (Preston), Ltd. (P.C.).—Capital £2,000. Manufacturers of and dealers in medicines, confectionery, chemists' sundries, etc. Neville C. Bailey, William C. Bailey, and Frederick Chaloner, M.P.S., 18 Blundell Lane, Penwortham, Preston, directors. R.O.: 46–52 Elswick Road, Newcastle-on-Tyne.

Rogo Chemical Industries, Ltd. (P.—Capital £1,000. Manufacturers of dealers in chemicals, dyestuffs, disinfecta foods, toilet goods, etc. G. Rogers, Hampton Road, London, E.7, and J. M. Gorden, 116 Langford Court, Abbey Rollondon, N.W.8, directors. R.O.: Cranbourne Gardens, N.11.

PLANT HORMONES, LTD. (P.C.).—Cap £1,000. Manufacturers of, agents for wholesale and retail dealers in organic inorganic chemical products for use agriculture, etc. Albert J. Wuertz-F (Swiss), Piltdown, White Lion-Road, Li Chalfont, Bucks, perfumery essence ma facturer; and Cyril H. Temple, direct R.O.: Mount Pleasant, Alpert Wembley.

GLASSTONE & GORDON, LTD. (P.C.) Capital £1,800. Consulting, manufactur and general chemists, herbalists, etc. Je E. Grove, 882 Grimesthorpe Road, Sheffi (a director of Jenners (Chemists), Ltc Leonard C. Laxton; Geoffrey W. Unw M.P.S., 111 High Street, Rayleigh, Essex director of Yardley (Rayleigh), Ltd.); a Arthur S. Gordon, directors. R.O.: 2 Porters Avenue, Dagenham, Essex.

ADJUSTMENT ORDER.—Alfred Ern Chadwick, M.P.S., 16 Mount Echo Aven Chingford, Essex; adjustment order unthe Liabilities (War-time Adjustment) A 1941, granted July 9.

DELETED FROM REGISTER.—"The Lodon Gazette," August 24, notifies the Irving's Sea-Vitoids, Ltd., and Madis (Chemists), Ltd., have been struck off the Register of Companies.

WINDING-UP.—At an extraordinary ge eral meeting of members of Woodlar Chemists, Ltd., held in London on Aug II, the following Extraordinary Resoluti was passed: "That it has been proved the satisfaction of the company that tl company cannot, by reason of its liabiliti continue its business, and that it is adv able that the same should be wound u and that the company be wound accordingly. That Frederick Wilcock, 3 Salisbury House, Finsbury Circus, Londo E.C.2, be and is hereby appointed t liquidator of the company."

VOLUNTARY LIQUIDATION.—Meetings creditors and members of Homburg Pharm Ltd., will be held at the offices of Gundr Cole & Co., 3 Great Winchester Stree London, E.C.2, at 12 noon and 12.15 p.1 respectively on September 16.

LAVOISIER, 1743-94

E debt chemistry owes to Lavoisier, bicentenary of whose birth occurred on gust 26, is acknowledged. When a tinction is drawn between alchemy and odern chemistry, the dividing line may rhaps be placed at his formulation of the eory of the indestructibility of matter. Rien ne se perd. Rien ne se crée.") This y be regarded as fundamental to the odern science of chemistry

it has developed, just the phlogistic theory, ich Lavoisier exploded, illustrative of the many cturesque hypotheses ich as "spontaneous genation") that were prevat before the methods of se observation and accute measurement were iversally applied.

Product of his Age

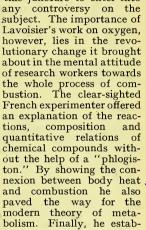

Antoine Laurent Lavoisier is born in Paris, at a time nen the rationalism of litaire was the prevailing ilosophy, and undoubted-this fact had its influence his career. Of outstand-

mental energy and financially in comtable circumstances, Lavoisier was caple at once of appreciating the new entific activities of his age, and of being le to carry out experiments on a generous ale. At the early age of twenty-five, after blishing treatises on the best method of uminating the French capital, and on ological phenomena, he was admitted to e Academy of Science. The theories of ack, Cavendish and Priestley concerning e elastic nature of fluids and gases rticularly attracted him, and his ex-riments were subsequently largely in this rection. A difficulty that kept recurring him-after early experiments on phosnorus and sulphur had shown him that ese substances increased in weight after mbustion—was that an increase in weight lould mean a gain of something, and not e loss of any hypothetical "phlogiston," ich as Priestley and others postulated. He arsued his logical inferences on this queson between 1765 and 1777, when he was ire enough of his facts to advance proofs at combustion was due to combination a substance with a gas present in the tmosphere. To this he gave the name xygen ("acid-producer") from a mistaken,

if understandable, belief that the gas was present in all acids.

Elucidation of the Mechanics of Combustion

Lavoisier's title to have shared in the discovery of oxygen has been discussed at some length in these columns (see Annual Special Issue, 1936, p. 763). There is thus no occasion at this juncture to enter into

Antoine Laurent Lavoisier

lished the system of chemical nomenclature which remains in general use—a pregnant enough tribute to his prevision. Lavoisier's work on combustion and calcination began in 1772 with his collaboration with Macquer and Cadet in their attempts to burn diamond. He followed this by experiments in obtaining elastic fluids by heating various substances after the manner of Hales, Black, MacBride and Priestley, and in work on the calcination of metals he found that there was a limit to the process in a limited amount of air. During 1773 he was occupied with his calces, air and the fixed air (CO₂) of Dr. Black (see below). In his mind there was a confusion between "fixed air" and that portion of common air which was the active agent in combustion and calcination. As we have already seen, Lavoisier was made acquainted by Priestley in October 1774 with the results obtained by the latter in his experiment in the previous August upon the mercurius calcinatus. Lavoisier repeated Priestley's experiment in March 1775, and at first thought the released air was "fixed air"; but as it did not precipitate lime water he concluded it was common air with "a little of the nature

of inflammable air." During 1776 and 1777 he prosecuted his work upon the properties of Priestley's "dephlogisticated air," especially in regard to its respirability and the maintenance of combustion of lighted candles. He noted in 1777 that a burning candle converted only "the pure part" of common air into "fixed air," and showed that air consisted of two elastic fluids, the "pure part" and a non-respirable part. The crucial experiment was his famous demonstration in which he calcined mercury in a closed vessel for twelve days. The residual air was "mephitic." The calx he had obtained was then heated in a retort and the expelled air collected over water; this was respirable, and when mixed with the residual mephitic air the mixture had all the properties of common air.

Quantitative Method

That the quantitative method in chemical investigation was inaugurated by Lavoisier has been disputed by Dobbie (see C. & D., 1899, II, 942), who demonstrated the indebtedness of the Parisian to the Glasgow lecturer Dr. Black (1728-1799). Black's work was notably on the alkalis and alkali carbonates, whose relationship to one another he elucidated, and there is certainly evidence that Lavoisier made use of Black's discoveries. Nevertheless, there is no disputing the fact that Lavoisier, whose positions as director of the French government's gunpowder mills and as a member of the Ferme (the private concern entrusted with the collection of the taxes) gave him an understanding of the importance of statistics, developed and applied the quantitative method in all his researches. This is exemplified in his examination of the supposed conversion of water into "earth," of which the following description is taken from "Occasional Fragments of Chemical History":—

"After having boiled water continuously for 100 days in the stoppered 'pelican,' Lavoisier found that the glass had been attacked to such an extent that it had lost 17:38 grains in weight and that the solid matter deposited at the bottom of the pelican weighed 4:9 grains, while the substances in solution in the water left behind on evaporation weighed 15:5 grains—that is, the total solid matter recovered amounted to 20:4 grains, or just over three grains more than the actual loss in weight of the pelican. Lavoisier explained that this excess might be attributed to the circumstance that the liquid contents of the pelican had, in the course of the later

operations of the experiment, been i renewed contact with other glass vesse from which a small part of their substance might have been dissolved. Moreover, he mentioned it as probable that a small quantity of water had combined with the earth."

The "Traité Elémentaire de Chimie, published by Lavoisier in 1789, has bee likened to Newton's "Principia" in it effect of establishing a unified science. H other works were on a variety of subject ranging from agriculture to administration but even the titles of his chemical contribu tions bear witness to the breadth of hi interests. They include "The Combustion of Phosphorus and Sulphur"; "Experi ments with Diamond"; "The Calcination of Tin"; "The Solution of Mercury is Nitric Acid"; and "Carbonic Acid." The end of Lavoisier was cruel and undeserved He was guillotined in 1794 for supposed malpractices in adulterating tobacco while an officer of the Ferme. When he was executed. Lavoisier was at the height of his powers. Had he survived to the normal span his services to chemistry, already immense, might have been incalculably greater.

MUSTARD GAS POISONING IN THE HORSE

WATSON ("Veterinary Record," July 31, p. 301) describes the case of a pony which apparently suffered from mustard gas poisoning from grazing in a field in close proximity to which mustard gas had been used in the course of military exercises The initial picture was one of extremenausea, profuse salivation, and every few minutes the animal dipped its nose into a nearby trough of water. The salivation caused fits of coughing. The entire mouth region was freely flushed with a solution of sodium bicarbonate (one dessertspoonful to a pint of water), the eyes and nostrils were sponged with solution of boric acid, and later the mouth was swabbed three times daily with a solution of r-1,000 acriflavine. As a precautionary measure the feet and legs were washed with soap and water to which had been added a little sodium carbonate. The water in the drinking trough was replaced by a solution of sodium bicarbonate. A dose of ammonium carbonate was administered by a stomach tube. The animal commenced to feed normally after two days and subsequently thrived quite well.

PERSONALITIES

R STANLEY WOODMARK has been conted to a third term of office as Master he Society of Apothecaries.

R. JOHN McGIRR, B.Sc., M.R.C.V.S., been awarded the first Wellcome junior with in veterinary research.

R. C. E. GERHART, pharmacist, Corona, Alberta, has been appointed Minister Municipal Affairs in the Alberta ada) Government.

LYING-OFFICER J. B. SHEPHERD, M.P.S., Newport Road, New Bradwell, Bucks, eported missing from an operational tover Germany. F.-O. Shepherd is ty-three years of age and volunteered the Royal Air Force two years ago. was educated at Nottingham Univerqualified in 1935, and formerly manla pharmacy at New Bradwell.

ISS M. C. ISLIP, M.P.S., who was ntly elected president of the National sciation of Women Pharmacists, is rmacist at Paddington Green Children's pital. She qualified in 1929, and has employment secretary of the Associa—a post she still holds—since 1938. Islip was chairman, Harrow Branch he Pharmaceutical Society in 1939-40.

OUNCILLOR J. W. HUDDART, M.P.S., West Park Drive, Blackpool, has been ninted a justice of the peace for the bugh. He has been a member of the n Council for over five years, and is chairman of the local Education Comee. Councillor Huddart is also a former ident of Blackpool Chamber of Trade the local Rotary Club and a member he Blackpool Insurance Committee.

R. CHARLES EGGO, M.P.S., 8 Union et, Stirling, who has been missing since fall of Singapore, is now reported a oner of war in the hands of the Japanese. Eggo served his apprenticeship with W. Yule, M.P.S., Port Street, Stirling, qualified in 1940 and in 1941 took his oma in biochemical analysis at Glasgow versity, afterwards volunteering for the al Army Medical Corps.

BIRTHS

ARROWMAN.—At Craigard, Renfrew, on ust 25, Lily, the wife of George Barrow-1, M.P.S., 4 High Street, of a son.

owler.—At Thorpe Hall, Peterbogh, on August 20, Anna Margaret, the of Alfred Cyril Fowler, M.P.S., 78 lge Street, Peterborough, of a daughter ne Elizabeth).

MARRIAGES

COLE — O'RIORDAN. — At St. Brigid's Church, Killester, co. Dublin, recently, Hubert A. Cole, M.P.S.I., 49 Sandycove Road, Dublin, to Alice O'Riordan.

DEATHS

BISSET.—At Burntisland, on August 22, Mr. James Bisset, M.P.S. Mr. Bisset qualified in 1920.

Brown.—Previously reported missing at sea, now officially presumed killed in action, Mr. Charles Bisset, formerly a representative in Scotland for Macleans, Ltd.

Cargill.—At Glasgow, on August 11, Mr. George Cargill, M.P.S., 268 Crown Street, aged fifty-one.

Cass.—In St. Chad's Hospital, Birmingham, on August 22, Mr. John William Cass, M.P.S., 64 Upper Street, St. Mary's Road, Birmingham, aged eighty. After a successful business career Mr. Cass nominally retired twenty years ago. Retaining a lively interest in pharmacy he devoted much of his leisure in doing holiday and emergency work for a circle of friends. An S.O.S. never failed to bring prompt and generous help and the memory of his lengthy useful life will be cherished in local pharmaceutical circles where he was highly esteemed.

Crane.—Recently, Mr. William Thomas Crane, M.P.S., 39 Warwick Road, Learnington Spa, aged sixty-four.

CULBERT.—At Airdrie, recently, Jessie Wilson Millar, the wife of Mr. W. Spence Culbert, M.P.S.

Evans.—Recently, Mr. Morgan Davies Evans, chemist and druggist, 26 Idris Villas, Towyn, aged seventy-five.

Hodgson.—Recently, Mr. Baron Cuthbert Hodgson, chemist and druggist, 58 Warley Road, Halifax, aged sixty-seven.

JESPER.—Recently, Mr. Charles Frederick Jesper, M.P.S., 24 Southbank Road, Southport, aged eighty-one.

Jones.—Killed in action, recently, Lieutenant Kenneth Jones, who, prior to the outbreak of war, represented A. L. Simpkin & Co., Ltd., chemists' confectionery manufacturers, Sheffield, in the South-western counties.

PEEL.—On August 16, Mr. Wilfred Peel, M.P.S., 41 Stainland Road, West Vale, Greetland, Halifax, aged sixty-one.

Wood.—At Watford, recently, Mr. Harold Elderkin Wood, Ph.C., 97 St. Albans Road, aged sixty.

The New Control of Toilet Preparations

last week's issue (pp. 224-25) we pubed a memorandum issued by the Board Trade on the new Toilet Preparations er. The Order itself (the Toilet Preparais (No. 3) Order, 1943, S. R. & O., No. 3) is now available, price threepence, n the Stationery Office, York House, gsway, London, W.C.2. The new Order, ch came into force on September I, inluced an entirely new method of restricand control of supply. The old system uotas is superseded by one of individual nsing, and it is to operate in a manner t should close the legal loopholes of the former toilet preparations Orders and a stop to deliberate illegal production supply which has fed a steadily growing ck market in these goods. The amount goods to be supplied, in value, is in no way ther reduced but, generally, there is an round tightening up of control. ne time past it was known that the authors were concerned with the vast increase the illegal production and supply of metics, toilet preparations, and similar ds, but they had little power to check it. e main features of the new licensing tem are as follows:-

Control of Manufacture and Supply

Manufacturers who are included in the department's Toilet Preparations Register will by this time each have received an individual licence to manufacture and supply specified types of controlled goods up to a certain value for the four-month period September 1 to December 31. The licence will also state the address of the premises at which the goods are to be manufactured. the sizes of the containers in which the goods are to be packed, and the minimum value of each unit to be counted against the licence value; where a higher value is obtained this will be taken as the value of the unit against the total value of controlled goods stated on the licence. Although manufacturers' names are in the Toilet Preparations Register they must not manufacture any class of controlled goods without first having obtained a licence to do so from the Board of Trade. Manufacturers are not permitted to process goods which are not their own property, but exceptions to this rule, and similar matters, will be considered in cases where two or more firms have been "concentrated."

The Control of Raw Materials

The department has recognised that much of the abuse of former Orders has been due to the availability of raw materials, much of them from unusual and new sources. and, to some extent, to the introduction of new and substitute materials. From September I it has been an offence to sell raw materials to be used for the purpose of manufacturing goods controlled by the Order except to firms whose names appear in the department's Toilet Preparations Register, and to retailers who may be classed as authorised suppliers of controlled goods (retail chemists) if they were supplying controlled goods of their own manufacture on October 1, 1941. The onus of conforming to this regulation will be on the supplier of the raw materials, but a purchaser who does not come within one of the above categories would also be liable to prosecution. Suppliers of raw materials can check the names of wholesale customers from the Toilet Preparations Register, and in the case of orders for raw materials to be used for making controlled goods from retail chemists, it will be necessary to obtain a

declaration from buyers that they are authorised but unregistered manufacturers and suppliers of goods controlled by the Order.

The Retail Chemist's Position

Retail chemists, provided they were manufacturing and selling their own controlled goods on October 1, 1941, are given what may be termed "an open general licence" to make and sell their own goods up to the sales value of £41 13s. 4d. in any one month. Controlled goods purchased from registered suppliers are excluded from this value. For instance, besides making and selling his "own line" controlled goods to the above value a chemist can sell without limit all the national branded toilet preparations he is able to purchase.

Marking for Identity Purposes

All controlled goods must be clearly marked on the container with the name and address of the maker and the name of the controlled product prior to being supplied. This rule is to be rigidly enforced both as regards wholesale and retail transactions. and offenders are likely to be prosecuted without warning for a first offence. It comes fully into force for manufacturers on December I next and for retailers on January I, 1944. Repacking by registered suppliers of controlled goods, except under licence, and except by retailers into customers' own containers, is prohibited, and in the latter case the container must be marked with the name and address of the supplier and the name of the product prior to it being supplied. It is understood the department will shortly issue a list of "licensed packers." No person may supply any goods as toilet preparations if, when he acquired them, they were not marked and invoiced in such a way as to indicate that they were toilet preparations. Neither must they supply goods as other than toilet preparations believing them to be required for use as such.

The Keeping of Records

Both registered suppliers and retailers are required to keep detailed accounts of their purchases of raw materials, the quantities and kinds of controlled goods they manufacture, and detailed records of sales. Manufacturers will make periodical returns to the department of their business, b retailers (unregistered but authorised su pliers) will not need to make such return It should, however, be understood th retailers must keep such records to t extent that each "supply" must be enter up immediately the sale of an "own line product has been made. Representativ of the department will visit retailers for t purpose of checking such records, and tes will be made from time to time. For i stance, an inspector may purchase over t counter a unit of an "own line" toilet pre aration on, say, a Wednesday. He ma call back on the Friday and, after disclosihis identity and showing his authority, ask see the retailer's record of day-to-day sal of his own manufactured controlled good If the sale made to him on the previo Wednesday is not entered up in its norm order the retailer will be liable to prosec tion. It will not be sufficient to enter sales at the end of the day or once a wee the record must be made at the time of sal The department is of opinion that it essential this rule should be rigidly adhere to by retailers.

Miscellaneous Regulations

The supply of hair preparations contain ing petroleum products by registered pe sons is prohibited except under speci licence, and these will cease after Decemb 31, 1943. The supply of these preparation by retailers is prohibited after February 2 1944. The supply of controlled goods co taining more than one part in 200 by weig of specified solvents is to be prohibited e cept under special licence by registered su pliers after October 31, 1943, and by retaile after December 31, 1943. Shampoos, i cluding soapless types, are excluded fro the provisions of the Order. Shampoos all descriptions are controlled under a Order of the Ministry of Food. Retaile may freely supply calamine lotion, ex the quota of £41 13s. 4d., but they cannot supply it on a doctor's prescription or und any other circumstance outside their quota Supplies of all controlled goods to N.A.A.F and other institutions specified in the secon Schedule to the Order are outside the ordin ary licence. The Order itself, consisting ten pages of closely printed matter, ma appear-as indeed it is-exceedingly con ated, but licensed suppliers and retailers, it is hoped, appreciate that this rigid trol is necessary in order to restrict protion and sales to their intended limits, to preserve the business for established kers and traders. The war-time scarcity these goods has attracted an undesirable nent which has sought to make excessive incial gains by putting on the market traband goods of dubious quality, and in the national interest, as well as that the established trade, wholesale and all, that it should be ruthlessly eliminated, the department seeks the co-operation the legitimate trade to achieve this end.

hen Negative may be Positive

a labelling of what are generally known female capsules has presented a difficult blem since the passing of the Pharmacy Medicines Act, 1941, Section 9 of which hibits advertisements relating to articles any description "in terms calculated to 1 to the use of" these articles in the curing of abortion. Some manufacturers their desire to comply with the Act have nted on the label of this type of product rds such as "not to be taken in cases pregnancy," but as the result of the ddersfield prosecution, reported in the 6 D., August 28, p. 213, it will be necesy for such "warnings" to be deleted.

The ingredients of this type of preparation familiar to all chemists, and reference oks on therapeutics usually indicate that drugs concerned, such as aloes and inyroyal, are used as emmenagogues. is of importance, therefore, to compare se statements with those made in recent inths when legal actions involving "female ls" have been sub judice. Dr. Roche nch (senior official analyst to the Home fice), in giving evidence before the armaceutical Society's Statutory Comttee (C. & D., 1942, II, 143), said that of pennyroyal was a reputed aborticient but the amount in the capsules hich also contained carbonate of iron d oil of cajuput) was so small that it ould have no abortive action whatsoever, d added that oil of cajuput as an ortifacient was negligible. Later, rmingham, when two women were osecuted for, among other charges,

procuring a "noxious thing" called aloes, it was stated by the prosecution that the pills, which weighed 3\frac{3}{4} gr., and contained \frac{1}{4} gr. of aloes, were sold as female corrective pills. Evidence was given by Professor Webster, director of the West Midland Forensic Science Laboratory, who stated that he had conducted post-mortem examinations on girls who had taken pills of this nature and died as a result from abortion. He considered "not to be taken by pregnant women," so far from acting as a deterrent, was simply an advertisement. Huddersfield prosecution Dr. J. M. Gibson, Medical Officer of Health, said pennyroyal, which had a popular reputation for producing abortion, might produce this effect, but the quantity in the compound was so small that he doubted if it would in this case. His opinion was that the ingredients would have little effect, but that the "not to be taken" label would cause some women to use the capsules in the belief that they would cause miscarriage.

"Warning" No Safeguard

It will be seen that in two of the three cases quoted medical evidence has been to the effect that, while the ingredients of the preparation were virtually of no value for procuring abortion, the prohibitive label would have the opposite effect from that apparently intended. In the Birmingham prosecution too, Dr. Webster held the same view as regards the label. In Huddersfield the counsel for the defence argued the value of the prohibition with great ability, but the stipendiary was of the same opinion as the doctors. The effect is, therefore, that to label female capsules with such a warning as has become the custom is not a safeguard against a prosecution for selling an abortifacient, whether the ingredients are of value for the purpose or not. This leads to an interesting situation. According to the evidence the only potent drug is aloes, yet more than one proprietary on the market contains this ingredient. Then if such ingredients as the oils of pennyroyal and cajuput and iron carbornate in the amounts contained in the products are of no value as emmenagogues, is it not in the public interest for legal action to be taken against the sellers under other legislation than the Pharmacy Act? Chemists, too, may have to answer to the Statutory Committee, and it would perhaps be more discreet to do as many have already done, i.e. discontinue the sale of these preparations if they are harmless, or supply only on prescription.

STATEMENT ON PENICILLIN

The Medical Research Council has issued the following statement on the present position as to the supply and distribution of penicillin, which is "known in the profession, and even to some extent among the laity" to have remarkable properties:—

In order to extend and amplify the pioneer work of Professor Fleming, and of Professor Florey and his colleagues at Oxford, the Medical Research Council, at the request of the Ministry of Supply, last March appointed a Committee on Clinical Trials of Penicillin, which controls the distribution of penicillin for purposes of clinical research, and is instructed to employ the present limited supplies to gain new knowledge of the curative possibilities of the drug rather than merely to repeat the therapeutic successes of which it is already known to be capable. In addition to a quantity allocated to the War Office for trial in wounds in the Army overseas, supplies of penicillin for research into the systemic treatment of selected infections have been allocated to four centres in this country; four others are receiving, or are about to receive, smaller supplies for the study of local treatment only. It has not seemed advisable at present that these centres should be made generally known, nor that an invitation should be issued to refer suitable cases to them, because the number of patients which can be dealt with are so limited that this could only cause widespread disappointment.

The policy of the therapeutic trials now

proceeding is to treat conditions keep to be susceptible only so far as is necessary to define the minimum effective degree the best methods of administration any factors not yet studied on success may depend, and to explor possibilities of penicillin treatment in additions hitherto unstudied from this in of view. Penicillin is known to have action on many species of bacteria, of which cause a great variety of less these, together with the many forms very consideration of the second of t

Even with the fullest co-operation of Ministry of Supply and of the man turing firms, the difficulties in ma penicillin on a commercial scale are so formidable that the present outp this country is scarcely sufficient for work in the four main research cer and is only a minute fraction of the d tity which would be required if all cas even a few specified infections were t afforded treatment. Production on a gr increased scale is being urgently undert both here and in the United States, b both countries the requirements of fighting services are likely to absorb of the output for some time to come, to name a date when adequate supplies be available for general use is at pre impossible. It will be appreciated the fore that requests for supplies of penic for the treatment of individual pati cannot, under existing conditions, be

PENICILLIN RESEARCH PROGRESS

As will be seen from the Medical Research Council's statement about penicillin supplies and distribution (above), it remains impossible to forecast a date on which supplies of this important bacteriostat will be available for general use. Nevertheless, researches upon penicillin have made considerable progress, and it is as well that chemists should have some knowledge of the state of present knowledge of what may one day become a main weapon of precision in the physician's armoury.

The earlier work by Florey and Florey (see C. & D., 1940, September 7 Coloured Supplement and 1941, I, 110) was carried forward by the same authors in the "Lancet" (March 27, p. 387). They there enumerated "facts that must always be kept in mind when the drug is used for the treatment of

patients." These include the following reasonably stable impure sodium sal penicillin can be made. This is extrer soluble in water but is destroyed by boil by acids, and alkalis, certain heavy me oxidising agents, and enzymes produced air and other bacteria. Penicillin is bacte static and not bactericidal, at least in centrations likely to be used therapeutica and reliance must therefore be placed the body defences, both humoral cellular, to destroy the bacteria presen a lesion while penicillin prevents t multiplication. Pus, blood, serum tissue autolysates do not interfere with antibacterial action of penicillin, and number of organisms present has little no effect on its capacities. Leucocytes live and tissue cultures will grow in

ence of a concentration many times ter than that necessary to produce eriostasis. Mice will tolerate without symptoms a dose much in excess of which will produce bacteriostasis in blood, and artificially induced infecs in mice can be controlled by repeated ctions of penicillin.

harkable Results from Injection

he few therapeutic trials previously rted indicated that no serious toxic ptoms need be anticipated in man. v also showed that penicillin is rapidly eted by the kidneys in a high concenion, so that large doses must be given naintain a bacteriostatic level in the Of fifteen cases of serious illness ted, ten resulted from staphylococcal inons, three from infection with actinoes or streptothrix plus an anærobic ptococcus, one was due to Streptococcus lans and the remaining one was a sulphoide-resistant streptococcal meningitis. y included infections "so advanced that outlook was hopeless by all previous dards," yet all recovered. The results ited to the conclusion that a generalised hylococcal infection can be cured with icillin (unlike the sulphonamides). t practicable method of administration found to be intramuscularly at threerly intervals. To ensure that the blood at least enough penicillin to inhibit wth of the infecting organism, a dose of order of 15,000 Oxford units was nired.

al Applications

ocally the treatment was used in 172 ctions of the eye and mastoid process, but wound sinuses, etc. In most cases, phylococci and streptococci were eliminal; healing followed. Repeated applicates at short intervals were necessary, but lications as powder, ointment or solution e all remarkably successful. The tests red to confirm that there are virtually toxic effects from penicillin, and it may found that impurities have accounted any doubtful effects noted. There is, ever, some evidence that a penicillinstance may arise in bacteria if insufficilly large doses are given at the outset.

ated Compounds

he chemistry of penicillin and related pounds was reviewed in the "British lical Journal" of April 17, p. 481. de penicillin extract has a yield of ut 4 Oxford units per c.c. of culture

fluid, but by means of absorption, distribution between solvents, and reduction, a barium salt has been obtained, having an activity of 450 to 500 units per mgm., which appears homogeneous by chromatographic analysis. By elementary analysis an empirical formula has been suggested for this salt, but its structural formula is necessarily more difficult to ascertain. This purified penicillin completely inhibits the growth of Staph. aureus at a dilution of I in 24,000,000 to 30,000,000, and is free from toxic reactions as judged by its effect on leucocytes or on mice into which it has been injected. It is very unstable, and is readily inactivated by treatment with acid, alkali, or by boiling. In the form of the dried barium salt, however, it keeps its antibacterial power indefinitely. Among other substances having bactericidal properties and isolated from bacteria or fungi are pyocyanase from Pseudomonas aeruginosa; tyrothricin (gramicidin and tyrocidin), isolated from Bacillus brevis; actinomycin A and B, isolated from A. antibioticus; and pro-actinomycin. A total of ten saprophytic actinomycetes are bacteriostatic in some degree to the Gram-positive cocci. Some, such as tyrocidin and pro-actinomycin, are unsuitable because they are toxic to mice and stop the movements of leucocytes in high dilution after only a few minutes. Gramicidin is toxic on intravenous injection, but is less dangerous when applied locally or injected subcutaneously or intramuscularly.

Novel Type of Base

The known facts about penicillin indicated that a substance responsible for certain reactions was a fundamental part of the penicillin molecule (see "Nature," 1943, I, 107) and that it was a novel type of naturally-occurring base, for which the name penicillamine was proposed. amine was obtained by hydrolysing barium penicillin at 100° C. for one hour by means of N/10 sulphuric acid and precipitating it from concentrated solution with mercuric chloride. After removing the mercury with sulphuretted hydrogen and evaporating at room temperature under diminished pressure, a mass of homogeneous crystals was obtained, for which analysis gave the formula $C_6H_{11}O_4N$. HCl. The exceptional properties of the compound include: Deep blue coloration with ferric chloride solution; reduction of ammoniacal silver nitrate solution; green colour with Fehling's solution; and reduction of iodine in cold acid solution.

Penicillin Progress in America

In the United States some sixteen companies are engaged in the production of penicillin, but production remains so limited that supplies are available only to the few, despite Press claims that an easier method of manufacturing the compound has been discovered. Penicillin has been successfully employed in Service cases of staphylococcal infections, carbuncles, pneumonia, septicæmia and osteomyelitis. In the Mayo clinic (see C. & D., July 24, p. 106) a continuous intravenous drip of normal saline or 5 per cent. glucose containing 10,000 to 20,000 units per litre is administered during a period of ten to twelve hours in generalised staphylococcal infection. Five cases of severe staphylococcal infection, one case of cellulitis of mouth and tongue due to a non-hæmolytic streptococcus, and one case of subacute bacterial endocarditis, were all treated similarly and, apart from the patient with subacute bacterial endocarditis, made rapid and uninterrupted recoveries. No toxic effects were recorded in these cases.

Economies in Use

The scanty supply of penicillin mal important to define the kind of infe for which this substance is specially cated. First priority should be given use in the treatment and preventio chronic osteomyelitis and other persi staphylococcal infections which cause much invalidity among the wounded o last war. Its value in the treatment o gangrene should also be tested, for McIr and Selbie found it superior to the phonamides and aminoacridines in ex mental infection with Clostridium we and Cl. ædematiens. Pyogenic (non-me goccocal) meningitis, empyema and pyæmic infection associated with anær streptococci which follows septic abor or gangrene of the appendix are other ditions in which penicillin should p The spread from case to cas useful. streptococci and staphlyococci which h acquired sulphonamide resistance in loc treated wounds and burns may bec rather a worry, as it is in gonococcal in tions.

TANNIC ACID DANGERS

Following reports received in this country of military experience in the Middle East, Barnes and Rossiter ("Lancet," August 21, p. 219) carried out, at the request of a committee of the Medical Research Council, work on possible toxic effects resulting from the absorption of tannic acid from a burned surface. Results of injecting solutions of tannic acid and sodium tannate totalling 0.25 mils of fluid into the tail veins of mice and ear veins of guinea pigs showed that tannic acid is almost equally toxic for both animals. The fatal dose is 40 mgm. per kilo of body weight. All recorded deaths occurred within fortyeight hours. It was apparent that much larger doses given intramuscularly could be tolerated. The suggested reason is that tannic acid and sodium tannate, being irritants, cause an acute inflammatory condition which delays absorption.

Relative Toxicity of Sodium Tannate

This was supported by the fact that sodium tannate, being less irritant than tannic acid and therefore more readily absorbed, was more toxic to rats. Guinea-pigs burned to the extent of a quarter of the body surface, and treated with tannic acid, had a higher mortality and greater loss in weight than similar animals burned to the same extent but not treated with tannic acid. After intraven and intramuscular injection of tannic a the internal organs of mice, rats and guir pigs gave a positive tannic-staining reacti

Effect on Large Surfaces

Following application of tannic acid large (one to two-thirds of the body surfa fatal burns in guinea-pigs, the liver, lur kidney and muscle beneath the burns g a positive test. With smaller (a quarter the body surface) non-fatal burns the t was negative for the internal organs positive for the muscle deep to the b and the ædema fluid separating the mus from the burned skin. After intraven injection of tannic acid to mice sev liver damage was seen histologically. At intramuscular injection of tannic acid sodium tannate there was slight thou definite liver damage. After application tannic acid to the raw area produced burning guinea-pigs to the extent of quarter of the body surface there slight liver damage, greater than that se in untreated animals similarly burn The injection experiments thus make clear that tannic acid is a toxic substan and experimental evidence suggests that should not be used indiscriminately on la burned areas.

TRADE REPORT

quotations for pharmaceutical chemicals, crude drugs and essential oils represent rices for wholesale quantities of standard quality. C.i.f. quotations do not include be war risk insurance and other abnormal charges payable in the present emergency

Essex Street, W.C.2, September 1

month of September commences in ondon drug and chemical markets with evidence of any improvement in ess. Numerous inquiries are being ved, but many of these are for goods nger on the market. A steady routine continues, however, in replacement for the home consuming industries in this connexion, dealers are kept nably busy. During the past week changes have been few in number generally of a minor character. In MACEUTICAL CHEMICALS one advance been notified, namely, an increase of er lb. in the price of BISMUTH SUB-ATE. At the time of going to Press s of the Wholesale Drug Trade iation scale for this chemical were vailable. It will be published in the D. at the first available opportunity.

Drugs

single item can be selected from the E Drugs section of the markets as worthy of special comment. Business emained quiet and of a routine char-Cape Aloes continues in good nd, but spot supplies are extremely alt to find: no offers are available from , one reason suggested being a shortof labour for collection. Balsam of remains firm and price unchanged; DA BALSAM is inclined dearer. Only all trade is noted in Benzoin, supplies ich are reserved for the manufacture British Pharmacopæia preparations. le prices for small quantities of HOR imported by the Ministry of ly are still awaited. Inquiry continues ASCARA SAGRADA but no offers can be rom origin. Mombasa Chillies is the variety quoted, but no price change ccurred. Sound Ergor is not easy to but some wormy material may be ned on spot. Spot supplies of IPECACUcontinue scarce. MENTHOL is steady rather quieter. A fair consuming nd is reported for Rhubarb. Some ties of Seeds are easier, consequent ck of interest and absence of demand. understood that quotas have now been ited for SENNA. Inquiry for STRO-THUS SEED has been rather better.

Scammony Root and Ergot

The Directorate of Medical Supplies have informed the Botanical Drug Importers' Section of the London Chamber of Commerce, 69 Cannon Street, London, E.C.4, that they propose to recommend import licences for a limited quantity of Mexican SCAMMONY ROOT during the period ending August 31, 1944, and have asked the Section to arrange with the importers concerned for its importation. The Directorate have also informed the Section that they propose to recommend import licences for a limited quantity of Ergot of RYE during the period ending August 31, 1944. For both purposes the Section will be glad to hear, not later than September 8, from firms which imported these commodities during the years 1937-42. By "imported" is meant arranged the shipment and made payment to the overseas supplier.

Essential Oils

The schedule of controlled prices for . American and Empire Essential Oils published last week (p. 233), and repeated in this issue, has attracted a good deal of attention, presumably because of the wide differences in prices between these oils and the "free" oils quoted on the market. It is pointed out, however, that users who are not given a quota sufficient for their requirements may be obliged to purchase the dearer oils until such stocks of these products are exhausted. It should be noted that definite prices have not yet been fixed for oils from Empire sources, but the figures given on p. 255 represent the maximum amounts that will be charged. A schedule of prices of oils and fats allocated to primary wholesalers and large trade users during the four weeks ending September 25 has been issued by the Ministry of Food.

Exchange Rates on London

During August there have been no changes in the London valuations for the principal foreign currencies. The Bank of England fixed rates include: New York, 4.03 dollars; Montreal, 4.45 dollars; Dutch West Indies, 7.60 florins; Lisbon, 100 escudos; Stockholm, 10.00 kroner. The Chinese National dollar is valued at 3½da., and Madrid pesetas are at 40.50 to the £ sterling.

Pharmaceutical Chemicals

ACETANILIDE.—Steady and in good supply at 2s. 5d. per lb. for crystals, and 2s. 6d. for powder.

Aspirin.—Makers' quotations are steady. Quantities of 28 lb. to 1 cwt. are priced per lb. as follows (containers in brackets): 4s. (1-lb.); 3s. 10½d. (4-lb.); 3s. 9½d. (7-lb.); 3s. 9d. (14-lb.); 3s. 8½d. (28-lb.). Prices are net one month.

ATROPINE.—Makers' prices per oz. are as follows: Alkaloid, i oz., 35s.; 4 oz., 34s. 6d.; 25 oz., 34s. Sulphate, i oz., 28s.; 4 oz., 27s. 6d.; 25 oz., 27s. Methyl bromide and methyl nitrate, i oz., 65s.

BARIUM SULPHATE, B.P. (x-ray).—Lots of 28 lb. to 1 cwt. are supplied at the following rates per lb. (containers in brackets): Is. 5½d. (1-lb.); Is. 4d. (4-lb.); Is. 3d. (7-lb.); Is. 2½d. (14-lb.); Is. 2d. (28-lb.)

BISMUTH CO., PULV., N.F.—Prices per lb., in quantities of 28 lb. to 1 cwt. are as follows (containers in brackets): 2s. 3½d. (1-lb.); 2s. 2d. (4-lb.); 2s. 1d. (7-lb.); 2s. (28-lb.). Terms net, one month.

BISMUTH SUBGALLATE.—Price has been advanced by 9d. per lb. The W.D.T.A. scale will be published at the first opportunity.

Boric acid.—Makers' quotations are as follows: B.P. granulated, £60 15s. per ton; crystal, £61 15s.; powder, £62 15s. Packed in one-cwt. bags, delivered carriage paid in Great Britain, in one-ton lots and upwards. Commercial grades, £8 per ton less.

Bromides.—Potassium is quoted by makers as follows (containers in brackets): 3s. 5\{d. per lb. (1-lb.); 3s. 3\{d. (4-lb.); 3s. 2\{d. (7-lb.); 3s. 2\{d. (14-lb.); 3s. 1\{d. (28-lb.)}. Sodium, \{d. per lb. extra; Ammonium, 2\{d. per lb. extra; powder, 2d. per lb. extra.

Brucine.—Quantities of under 25 oz. are priced per oz. as follows: Alkaloid, is. $4\frac{1}{2}d$.; NITRATE and SULPHATE, is. $3\frac{1}{2}d$.

CIRATES.—Following are current prices per lb., in lots of 28 lb. to 1 cwt. (containers in brackets): 3s. 2½d. (1-lb.); 3s. Id. (4-lb.); 3s. (7-lb.); 2s. II½d. (14-lb.); 2s. IId. (28-lb.). IRON AND AMMONIUM (SCALES), B.P., is at 3d. per lb. above, and SODIUM is at one penny per lb. below, these prices.

Cocaine.—British makers' current wholesale prices are as follows: Hydrochloride and nyitrate, 25 oz. and over, 35s. 8d.; 16 oz. and less than 25 oz., 36s. 10d.; over 8 oz. and less than 16 oz., 38s. per oz. Alkalotd, citrate and salicylate, 25 oz. and over, 39s. 1d.; 16 oz. and less than 25 oz., 40s. 4d.; over 8 oz. and less than 16 oz., 41s. 7d. per oz., 16-oz. packages free, smaller packing extra. The scale of prices applicable to distributors of smaller quantities is as follows: Hydrochloride and nitrate, 8 oz., 40s.; 4 oz. and less than 7 oz., 40s. 7d.; 2 oz. and less than 4 oz., 41s. 6d.; 1 oz. and less than 2 oz., 42s. 7d.; ½ oz. and less than 1 oz., 44s. 2d.; ½ oz. and less than 1 oz., 47s. 3d. per oz. Alkaloid, citrate and salicylate, 8 oz., 43s. 5d.; 4 oz., and less than

8 oz., 44s.; 2 oz. and less than 4 oz., 44s. I oz. and less than 2 oz., 46s. 2d.; $\frac{1}{3}$ oz. an than I oz., 47s. 9d.; $\frac{1}{4}$ oz. and less than 5 os. Iod. per oz., packages extra. Re Sales are subject to buyers' undertaking n re-sell any quantity below current scale. E prices vary according to destination.

CODEINE.—Prices per oz. for small quan are as follows: ALKALOID.—½ oz., 48s. I oz., 45s. 9d.; 2 oz., 44s. 3d.; 3 oz., 43s. 4 oz., 43s. 3d. Hydrochloride.—½ oz., 1 oz., 39s. 6d.; 2 oz., 38s.; 3 oz., 37s. 4 oz., 37s. Phosphate.—½ oz., 37s. 9d.; 35s. 3d.; 2 oz., 33s. 9d.; 3 oz., 33s.; 32s. 9d.

Dextrose, B.P.—Quoted at the follo rates per lb., in quantities of 28 lb. to 1 (containers in brackets): Is. $2\frac{1}{4}$ d. (1-lb.); Is. $0\frac{1}{4}$ d. (2-lb.); Is. $0\frac{1}{4}$ d. (4-lb.); II $\frac{3}{4}$ d. (7-II $\frac{1}{4}$ d. (14-lb.); IO $\frac{3}{4}$ d. (28-lb.).

GALLIC ACID.—Steady at the recent adv to 9s. to 10s. per lb., according to quantity

Glucose.—Bulk home-trade prices per for powdered monohydrate are as follows tainers in brackets): Is. I½d. (I-lb.); Is. (2-lb.); Is. (4-lb.); IId. (7-lb.); Io½d. (I4-IOd. (28-lb.).

GLYCERIN.—Prices per cwt., for small sup are as follows: 56-lb. tin, 99s.; 14-lb. tin, 10 subject to 2½ per cent. discount, twenty-6 days.

GUAIACOLS.—CRYSTALS and CARBONATE, changed at from 14s. to 15s. per lb.

HOMATROPINE.—Makers' prices per oz. as follows (prices per gram in bracke Alkaloid, I oz., 97s. 6d.; 4 oz., 92s. 16 oz., 87s. 6d. (4s.). Hydrochloride, hydrodelende and sulphate, I oz., 75s.; 4 oz., 7 16 oz., 65s. (3s. 2d.).

Iodine preparations.—Prices per lb. the home market are as follows: Potass todide, B.P.—I12 lb., 9s.; 28 lb., 9s. (14 lb., 10s.; 7 lb., 11s. 6d.; 4 lb., 12s.; sma quantities, 12s. 6d. Sodium todide, B.F. 28 lb., 9s. 11d.; 14 lb., 10s. 5d.; 7 lb., 12s.; 4 lb., 12s. 10d.; smaller quantities, 13s. 10d0form, B.P.—28 lb., 12s. 10d.; 14 13s. 4d.; 7 lb., 15s. 6d.; 4 lb., 16s. 4d.; sma quantities, 17s. 2d. Iodoform crystals 2s. per lb. above powder prices. Iod resublimed, B.P.—112 lb., 10s. 4d.; 28 10s. 10d.; 14 lb., 11s. 4d.; 7 lb., 13s. 14 lb., 13s. 9d.; smaller quantities, 14s. 6d.

MAGNESIUM CARBONATE, LIGHT.—Home m ket prices per lb., for quantities of 28 lb.—1 cv are as follows (containers in brackets): 1s. 2 (1-lb.); 1s. 1d. (4-lb.); 1s. (7-lb.); 1l. (14-lb.); 1rd. (28-lb.). Prices net one month

Magnesium carbonate, heavy.—Make quote for the home trade the following priper lb. in quantities of 28 lb.—I cwt. (contain in brackets): Is. 6½d. (I-lb.); Is. 5d. (4-lb Is. 4d. (7-lb.); Is. 3½d. (14-lb.); Is. 3d. (28-lt Prices net one month.

Magnesium oxide, light.—Makers' price per lb. for the home market, for quantities 28 lb.—1 cwt., are as follows (containers

ts): 2s. 8d. (1-lb.); 2s. $6\frac{1}{2}$ d. (4-lb.); d. (7-lb.); 2s. 5d. (14-lb.); 2s. $4\frac{3}{4}$ d.

NESIUM TRISILICATE.—Makers quote for me market, in quantities of 28 lb.—I cwt., ows (containers in brackets): 3s. 6½d. per lb.); 3s. 5d. (4-lb.); 3s. 4d. (7-lb.); l. (14-lb.); 3s. 3d. (28-lb.).

ogallic acid.—Prices were recently ced. For details, see C. & D., August 21,

TONIN.—No change in home-trade prices, of which were given last week (p. 231).

TUM BENZOATE.—Supplies are fair; price 1ged at 2s. 9d. to 3s. per lb., according to ty.

PHANILAMIDE.—Current prices range from I. to 12s. 6d. per lb., according to quantity. YCHNINE SALTS.—Makers' prices are as

Compound	Under 25 oz. and under 100 oz.		100 02. and under 500 02.

Canadian Soap Business Increased.—Canadian manufacturers of soaps, washing compounds and cleansing preparations report a substantial increase in business during 1942. Production in 119 factories amounted to \$29,252,469 during the year, exports amounting to \$1,724,443. The value of toilet preparations produced during the year was £11,813,999. Exports of these products were valued at £463,505.

The Books Target.—The national book collection for salvage for the year was fixed at 50 million volumes. So far the collection totals 42 millions. Your old trade price lists count as volumes. You can discard them now that the C. & D. Price List of Medicinal Proprietaries sold over the Chemist's Counter is available from The Publisher, The CHEMIST AND DRUGGIST, 28 Essex Street, London, W.C.2, price one shilling, post free.

MISCELLANEOUS INQUIRIES

Rideal-Walker Figure.—C. P. L.—The Rideal-Walker coefficient of liquor chloro-xylenol., B.P.C., ranges from 4 to to 4.5.

Cine Film Cement.—F. W. W.—We think one of the following formulas will meet your requirements for a cine film cement:—

ient.—			
		I	
Glacial acetic	acid		 I part
Flexile collod	ion		 4 parts
	. 3	[]	
Glacial acetic	acid		 ı part
Amyl acetate			2 parts
Acetone			 2 parts
	I	H	
.Acetic ether			 3 oz.
Acetone			 I oz.

Dissolve in it one foot of film.

Rubber Latex.—H. L.—Books on rubber latex include "Latex in Industry," by Royce J. Noble, published by "Rubber Age," 250 West 57th Street, New York, 1936. This is a first-class book on the varied 250 West 57th Street, New York, applications of latex to industrial products and contains a comprehensive bibliography. Another book by the same publishers is "Latex and its Industrial Applications," by F. Marchionna, 1933. The following book is a very comprehensive one, "Chemistry and Technology of Rubber Latex," by C. Falconer Flint, published by Chapman & Hall, Ltd., 11 Henrietta Street, London, W.C.2, 1938. There is also available an English translation of Boemegg's "Latex: Occurrence, Collection, etc.," published in 1930 by The Chemical Catalog Co., 419 Fourth Avenue, New York.

Citric Acid.—M. V.—This may not be sold otherwise than by retail except to persons holding a licence. "By retail" is defined as being sales of citric acid of not more than I lb. net weight to a person buying otherwise than for the purpose of re-sale or otherwise than for a manufacturing purpose. So far as retail prices of both citric acid and tartaric acid are concerned, these would presumably have to be calculated in accordance with the Prices of Goods Act, 1939, as both substances could be classed as "drugs" and therefore are price-regulated articles. This means that no more profit could be made on a transaction than was made before August 1939, the profit being calculated in actual values and not as a percentage. It follows, therefore, that the prices although not "fixed" are indirectly controlled by the Prices of Goods Act.

Hair Cream.—C. D.—You should ceed on the same lines as formerly, but a vegetable oil in place of the liquid para A representative formula is:—

1				
Vegetable oil				160
White wax				8
Spermaceti		• •		2
Borax	• •	• •	• •	I
Water				I

Liquefy the wax and spermaceti in the dissolve the borax in the water and w both are at the same temperature mix shake into a cream. An anti-oxidant, s as Nipagin 1–500, should be added. consistency of the cream may be va by adjusting amounts of oil and water castor-oil cream can be made as follows:

Castor oil		 	200
White wax		 	IO
Cetyl alcohol		 	2
Borax	× .	 	I
Water		 	İ

Spermaceti may be used in place of calcohol if the latter is not available, preservative is not necessary.

Medicated Lip Salve.—The production a medicated lip salve to be sold out quota would not be without difficulty. would have to be established beyond doubt that the lip salve was a bonamedicinal preparation. In our opinion would preclude the introduction of col as this addition would immediately be it out of the medical class into that of toilet preparation, in which case qu restrictions would apply. It should also borne in mind that if the lip salve sufficiently medicated to bring it out the description of a toilet preparation would presumably be a substance reci mended as a medicine and therefore wit the scope of the Pharmacy and Medici Act, 1941.

Depilatory.— A. D.—The following presumably the formula you have in mi

•			
Ceresin		 	I OZ.
Yellow beeswa	x	 	2 OZ.
Resin		 	6 oz.
Alkanet root		 	2 dr.

Digest on a water bath for an hour, str and perfume. The wax is melted a poured over the part to be denuded of hand allowed to cool. The hair becor embedded in the wax, and on raising end and sharply pulling the strip of v off the skin the hair comes with it. I method is somewhat painful, but severely so, and is quite effective. THE HALL MARK OF

PHARMACEUTICAL DEPENDABILITY

Winter Specialities

The Co-operation of our friends is requested in order that our reduced personnel shall be able to handle all demands without delay.

The early anticipation of winter requirements will be very much appreciated and will materially assist in reducing our staff and transport difficulties to a minimum.

PHARMACY IN WARTIME

THE AYRTON SERVICE has stood even the test of war. Controls? shortages? delays? OF COURSE!—but all our customers have been 'kept going' with the essentials of trading pharmacy. Lucky is the chemist who is backed by a good supply house, particularly if it is all-embracing with seventy-five years' experience—like AYRTONS

AYRTON SAUNDERS & CO. LTD.

Make a note of this now. You CAN get "Curicones." So there is no need to disappoint your customers—or lose money yourself. It is true, of course, that only two sizes are now available, the 5/- size, and the large 24/- size. Your Wholesaler should have both sizes in stock. Delay may occur in delivery, so don't wait until you run out of "Curicones" before re-ordering. Staff shortage is now everybody's problem—and that lincludes your Wholesaler. He may not be able to attend to your orders so promptly as hitherto but he CAN supply you with "Curicones."

URICONES

-the remedy for Rheumatism and kindred troubles.

are still obtainable

Small size

Remember, "Curicones" is a P.A.T.A. line showing 33½ per cent. profit, nationally advertised and recommended by the medical profession.

IMPORTANT NOTICE

re

PARMINT COUGH SYRUP

On its new improved formula the ready-mixed Parmint Syrup needs a dosage for adults of only 1-2 teaspoons.

The bottle therefore gives nearly twice as good value as before.

All our Press advertisements now mention the retail price of both the ready-mixed Parmint Syrup (1/5) and the good old Concentrated Parmint Double Strength (3/1½).

Make sure you have a stock of both.

Winchester Quarts are no longer available

MENLEY & JAMES LIMITED

123 COLDHARBOUR LANE, LONDON, S.E.5

Quart measures, in Part Pots.

How to let the people know all about 'ASPRO', its service-safety-the quick help it renders, in limited space. That has always been a problem. A kindly advertising critic, remarking a few years back that 'ASPRO' had been "put on the map" in record time, commented that our advertisements were " crammed in with a shoe horn " -they were over-filled with interesting facts. Now our problem is intensified ten-fold by the reduced advertising space available in the Press. Nevertheless these small advertisements are doing a grand job, maintaining and fostering the vast 'ASPRO' goodwill.

The Chemist has his own problem. Although in many cases his display space is unchanged, he has to determine how to put it to the best possible use, both for the present and for the future goodwill of his business. It is worth remembering, therefore, that an 'ASPRO' show not only qualifies for bonus terms, but capitalises and preserves for you the goodwill of the leading medicinal line.

Fortunately, we are still able to supply a display or sticker on request, but it has become a matter of vital concern to the Nation that every piece of display material should be made to last. No more can be made or printed, so please use your present display as long as possible. When it is really worn out, put it with your other salvage and write us for a new one.

We have a limited supply of chemists 2-oz. bags available at 7/6 per 1,000.
